Pushbuttons & Indicator Lights:

The devices consist of an operator head and a mounting flange. The modular system allows up to 3 contact blocks and light elements to be attached to the mounting flange, allowing the installer to configure a variety of contact arrangements for each operator element. Both the mechanical systems and the electrical components are of heavy-duty design.

The devices are intended for 22.3 mm diameter holes. The use of an adapter ring makes it possible to easily mount devices in a 30.5 mm installation diameter without needing additional sealing on the front panel of the machine to seal the installation hole.

Schmersal has developed several series of control devices and indicator lights with distinct features:

Typical pushbutton assembly

N Series Assembly

R Series and EX-R Series Assembly

N Series

IP69K rating and Hygienic design

Series N was originally developed for the specific requirements of Protection class IP69K. This means that even when cleaned on a regular basis using high-pressure, high temperature cleaners they have an extended service life. They were also designed on the basis of the general design concepts for hygienic construction of food processing machinery (EN 1762-2), from food safe materials and designed with smooth surfaces and gradual transitions. Typical applications include food processing, pharmaceutical, petrochemical, and medical industries. Due to their resistance to spray water, they are deployed in outdoor applications such as a municipal vehicles, car washes, and in maritime areas. In addition, these devices are clean room approved.

The materials used in construction of these control devices and indicator lights are durable and are heat and chemical resistant; chromium plated ABS plastic fittings, thermoplastic operators, and pliable seals are available in white, black, or blue color.

R Series

Robust metal pushbuttons

When designing control panels on machines that will be working under particularly harsh conditions, it is advisable to use the R product portfolio. The "R" stands for "robust", which represents the main feature of this switchgear. The R series is resistant to mechanical loading and you can also operate it easily when wearing gloves.

Typical application include material handling systems, packaging machinery, chemical processing equipment, robot cells, folding or brake presses, filter presses, punching machines, printing machines, injection molding, palletizers, and other packaging equipment

The materials used in construction of these control devices and indicator lights are durable and are heat and chemical resistant; die cast aluminum fittings, glass or thermoplastic lens covers. Versions are available with protective membranes to prevent scratches in abrasive environments.

EX-R Series

For explosive atmospheres

When designing control panels on machines that generate or will be exposed to potentially explosive or flammable gaseous or dust born atmospheres, there are requirements to limit ignition sources. Schmersal has developed devices that are intrinsically safe, meaning they are lower voltage and do not generate heat above 135°C; they do not provide suitable energy to ignite most gas environments. They are also IP65 rated, to prevent dust intrusion into the electrical contact area. These pushbuttons are ATEX rated for use in Zone 1 and 2 gas environments and Zone 21 and 22 dust environments.

Typical applications include gas environments of printing machines, paint spray-ing plants, and petrochemical industry, and dust areas of grain mills, powder coating machines, and the textile industry, among others.

The materials used in construction of these control devices and indicator lights are durable and are heat and chemical resistant; chrome plated brass, coated brass buttons, thermoplastic lens covers.

IP69K Test: 175° F Steam at 1450psi

In the ATEX directive 1999/92/EG, the zones are defined in the following way:

Zone 1: "A place in which an explosive atmosphere consisting of a mixture with air or flammable substances in the form of gas, vapor or mist is likely to occur in normal operation occasionally."

Zone 2: "A place in which an explosive atmosphere consisting of a mixture with air or flammable substances in the form of gas, vapor or mist is not likely to occur in normal operation but, if it does occur, will persist for a short period only."

Zone 21: "A place in which an explosive atmosphere in the form of a cloud of combustible dust in air is likely to occur in normal operation occasionally."

Zone 22: "A place in which an explosive atmosphere in the form of a cloud of combustible dust in air is not likely to occur in normal operation but, it does occur, will persist for a short period only."

Joysticks

Schmersal offers a series of industrial grade joysticks suitable for 22.5 mm or 30.5 mm diameter mounting.

Models are available with up to four switch positions/actuating directions with up to eight contacts (two contacts actuated in each direction).

A variety of sealing bellows options make them suitable for especially harsh industrial applications, including outdoor usage with UV resistance and operable temperatures of -25 °C to +80 °C, or hygienic applications requiring IP69K Rating for high temp/high pressure wash downs.

Joysticks are available with two actuation types:

■ Maintained switch, locks into place with return to center (rest/neutral) position by touch.

■ Momentary switch, returns to center rest/neutral position by spring force

Models are available with either one, or can mix the two styles.

Foot Switches

Foot switches are used to start and stop operations and production processes on machinery and equipment where operation by hand is not possible. Safety foot switches can also be used as enabling switches when carrying out set-up, retrofit or service processes where the machine will run with safety guards open.

Typical applications include metal forming machines, woodworking machines, and machinery for packaging and textile industries.

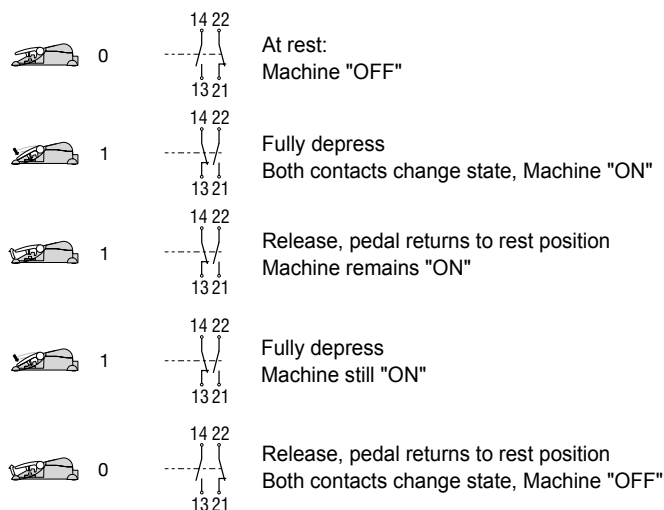

NKF Series

The NKF foot switch is a compact, low profile design, offering one, two or three pedals. The rugged ABS plastic foot switch is available with snap-action change-over contacts, or NO contacts – up to two contacts per pedal. Standard with two meter pre-wired cable, other custom colors and pedal configurations are available.

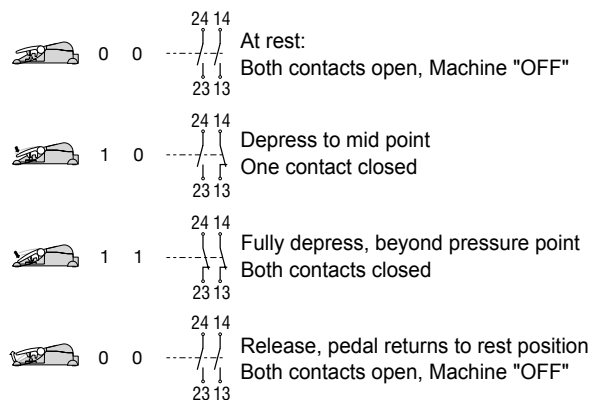

F 232 Series

Foot switches of the F-232 series are available as single or dual pedal versions. The FH-232 series are available with an optional, ergonomic protective shield to protect against unintentional operation. The powder-coated, robust die-cast enclosures are resistant to high mechanical loads. The 232 series foot switches are available with slow action (T) or snap action (Z) contacts, with 2 or 4 NO/NC contact per pedal. Optional functions include a pressure point (staggered) operation or a bi-stable (start/stop) function. Custom housing colors are also available.

F-232 options: Start/stop function (F)

Staggered contacts with 3 position actuation (HD)

Two Hand Controls

Two-hand control panels are designed as such so the operators need both hands at the same time to start a hazardous movement. This forces operators to keep their hands in the same place which means that they cannot reach into the danger zone while the system is carrying out the hazardous movement.

These two-hand control panels are fitted with an Emergency Stop button that complies with EN ISO 13850. It is also possible to mount up to eight additional command and signaling devices to the center console. Apart from this, there are guard hoods over the operating elements, which prevent people from circumventing the protection function using their hands, elbows, stomach, hips, thighs or knees. It is also not possible to operate from the back of the control panels.

The main areas of application for two-hand controls are presses and stamping units in the metal processing or powder metallurgy industries as well as similar machines and systems that involve manual insertion and removal operations. These include printing and paper processing machines, rubber and plastics processing machines, machines involved in the chemical industry and assembly plants.

Control Stations

Ergonomic operation of the main machine functions at the human-machine interface is a key factor in safety. The control units should be mounted as close as possible to the safety doors so that operators have an overview of the process. BDF Series control units meet this requirement. This series has been designed for mounting onto the commercially available aluminum profile systems of machine enclosures and you can quickly attach them and integrate them in the ambient structure. Machine builders can use the BDF range to represent the most common operator functions like Emergency Stop, ON/OFF, Forwards/Backwards, Operating Mode Selection, display of operating status conditions or error messages, etc.

The BDF200 Universal (-2875 variant) is field customizable, with several positions that can be adapted to become pushbuttons, illuminated pushbuttons or indicator lights of various colors. Choices are made by wiring and the application of various colored lens caps. Base models include:

- All 4 positions customizable
- E-Stop and 3 customizable positions
- E-Stop, keyed selector and 2 customizable positions.

Operator Options:

	PN	Type	Options	POS

BDF200

Heavy Duty Limit Switches

M330 series

This series is a heavy duty version of standard full size European Norm switches. They are IP65 and thus suitable for low-pressure water spray. In addition they have seawater-proof bodies with stainless steel or surface protected external metal parts. The body and actuator seals are resistant to most oils and gasoline.

Universal Series U 431,432,433 & 434

This series features slow action 1, 2, 3, and 4 contact models with field convertible NO and or NC contacts. In addition the switching point is field adjustable. Optionally, models are available with low temperature (-30°C) contacts, add -1252 to part number. These switches are

Heavy Duty Limit Switches

T/M 015, 016 & 017 Series

This series features snap action and/or slow action contacts in 2, 3 & 4 contact configurations. Slow action models are available with overlapping contacts. As an option, blow out magnets are available for switching up to 1A at 220v DC. These switches are IP65 rated and feature 3 conduit entries for flexibility in installation.

Heavy Duty Limit Switches

T/M 422, 441, 452, 461 & 470

This series features 1, 2, 3, 4, & 6 contact configurations. Models for high/low temperature and tropical environments are optional. In addition, overlapping and staggered contacts are available on selected models. These switches are IP65 rated and have 2 or 4 (470 only) conduit entries.

Heavy Duty Limit Switches

T/M 064, 067, 130, 136, 471, 035 & 250

These switches feature up to 10 contacts rated at 25 or 60 amps. A wide variety of options are available including high/low temperature models, overlapping and staggered contacts, latching contacts, and magnetic blow out contacts. Most are IP65 rated and have up to 4 conduit entries.

Series	T130	T136	T/M471	T/M035	T/M250
Material	Cast Iron	Cast Iron	Cast Iron	Cast Iron	Cast Iron
Dimensions	236 x 135 x 120 mm	236 x 154 x 120 mm	194 x 123 x 130 mm	58 x 142 x 61.5 mm	103 x 180 x 100 mm

Special Limit Switches

Material handling applications often need special purpose switches for slack wire detection, belt alignment, or rotation applications such as gear or spindle switches. Many feature the heavy duty limit switch housings with uniquely designed actuators for these purposes.

Slack-wire switches monitor wire rope tension. With correct tension present, the switch is actuated. The actuator arm contains a heavy duty roller.

Belt alignment switches are actuated when the conveyor belt becomes misaligned. Depending on the plant arrangements, this signal can be used to switch the equipment off or to provide automatic correction of the belt alignment. The actuator arm contains a heavy duty roller and can be actuated to either side.

The MSP452 **rotating spindle switch** with snap-action insert is suitable for use in normal to average operating conditions in machine tools, cranes, and conveyors. Actuation of the switch is adjustable and can be set between 4 and 55 spindle revolutions, with a 5 revolution run-out.

Gear-switches are suitable for use in the most varied application. In studios and on stages, applications include the control and positioning of carriages, portals and bridges. An important field of application is for the monitoring and control of outriggers, trolleys and lifting movements for cranes. On industrial ovens, gear-switches are used on door and gate control systems. Further applications are to be found on waterways (control of weirs and locks), in environmental protection (sewage plants, flue gas treatment plants), greenhouses and sport stadiums (roof controls). These switches are available with a variety of cam styles which can be offset for timing of particular events.

Series	T/M 441	M 330	T/M250	T/M441	G50	MSP452
Type	Slack wire	Belt Alignment	Belt Alignment	Belt Alignment	Geared	Rotating Spindle

Notes		Rod lever with nylon roller	Lever arm with aluminum roller, several roller length available Extreme temp version (T)	Lever arm with aluminum roller, several roller length available Overlapping contacts (U) Extreme temp version (T)	Various cam shapes for varying switch travel. Additional gear ratios available.	Adjustable spindle revolutions

Pull-Wire Switches

The pull-wire switches are used to give signals to start machines and to open or close electrically driven doors, gates and barriers. These switches are manually operated by pulling the wire.

Magnetic Reed Switches

Schmersal offers a wide variety of magnetic reed switches, which actuate in the presence of a magnetic field. They are available in rectangular or cylindrical profiles, constructed from durable thermoplastics or robust metal housings for harsher environments.

These magnetic reed switches have been successfully applied as position sensors in elevators, suspension railways, amusement park rides, and on AGVs. A wide variety of actuators are available, based on desired sensing distance, housing material, and mounting type.

Tec.nicum Engineering Services

tec.nicum offers product- and manufacturer-neutral consultation on important matters relating to machine safety and work protection. Our TÜV Certified Functional Safety Engineers for Machinery can plan and realize complex solutions for safety around the world in close collaboration with clients.

The range of services offered by tec.nicum cover four segments:

academy

In the complex area of machine safety, it is important to stay ahead of the game. To do this, we offer a variety of opportunities through our tec.nicum academy: With a comprehensive range of training courses on numerous topics, including General Machine Safety, ISO13849, Safety Circuits and Wiring, and Understanding and Conducting Risk Assessments; with customer specific in-house training seminars; and webinars.

technical

With regard to technical support, our experts provide safety appraisals and check conformity with applicable legislation and standards of machine safety and work protection. From the results of these investigations, they derive manufacturer-neutral recommendations for action and corrective measures with the aim of configuring the systems in accordance with the relevant directives. All the results of the investigations are fed into a comprehensive final report.

engineering

tec.nicum engineering supports the client in the development of new machines and systems or the modification of existing machines and systems so that, even from the projection phase, machine safety is implemented as efficiently as possible. Specialists in this area accompany the whole process, from initial planning talks to the definition of requisite safety elements to safety testing and inspection of the overall installation as well as handover of the complete project documentation.

integration

The experts at tec.nicum have built up extensive experience from projects in industries such as the packaging, food processing, automotive, construction, paper manufacture, metal processing, chemicals and pharmaceuticals. They install safety switchgear and sensors and also take account of special features, such as explosive areas. Furthermore, they can assist in the parametrization, programming and installation of complex components such as optoelectronic safety products and programmable safety controllers.

tec.nicum
excellence in safety
